introducing... AVITA HEARTBURN AND REFLUX CENTER

Providing advanced treatments to eliminate heartburn and other symptoms of acid reflux

Avita Heartburn and Reflux Center uses a multidisciplinary approach to provide the most advanced medical and surgical treatment options for acid reflux, its symptoms, and related disorders. From diagnostic screenings to minimally-invasive surgery, you can eliminate heartburn, your dependence on antacid medication and its potential side effects, as well as reduce your risk of developing esophageal cancer.

Acid Reflux – Another term for gastroesophageal reflux disease (GERD), acid reflux occurs when acid from the stomach flows backward into the esophagus. This often causes heartburn, which is described as a burning discomfort in the chest, neck, and throat that can last for several hours. Other symptoms include difficulty swallowing, regurgitation of food, chest pain, bloating, and chronic cough.

Heartburn – The most common symptom of acid reflux, more than 15 million Americans experience heartburn each day. If your heartburn symptoms occur two or more times a week, you should seek medical advice. If left untreated, acid reflux may cause a serious complication, such as Barrett's esophagus.

Barrett's Esophagus – Approximately 10% of people who have acid reflux are diagnosed with Barrett's esophagus. This condition is primarily caused by long-term exposure to stomach acid in the esophagus, resulting in changes to the cells lining the esophagus. These transformed cells can turn into esophageal cancer.

Antacids – Millions of Americans take antacids on a daily basis and could benefit from more permanent options, such as minimally-invasive surgery for acid reflux. At the Avita Heartburn and Reflux Center, you may be able to eliminate the side-effects of medication, as well as your dependence on it. This means you can stop taking the pills and regain control of your daily life.

Hiatal Hernia – A condition in which part of the stomach bulges through an opening in the diaphragm muscle, causing food and stomach acid to back up into the esophagus. This often results in heartburn, difficulty swallowing, and regurgitation of food.

Every breath *is a gift*

A pulmonologist is a lung doctor that specializes in the respiratory system – the organs responsible for receiving oxygen and expelling carbon dioxide from the body. At Avita Health System, our lung specialists treat a wide array of pulmonary diseases and infections, such as chronic obstructive pulmonary disease (COPD), emphysema, bronchitis, asthma, lung cancer, pulmonary fibrosis, pneumonia, and pulmonary embolisms.

For those diagnosed with chronic lung disease, every breath can be a struggle. These patients experience inflammation to the airways that mimics the feeling of breathing through a straw, making it difficult to maintain enough energy and lung function to perform daily activities. One of the most prevalent lung diseases is COPD, affecting nearly 30 million people in the US.

CHRONIC OBSTRUCTIVE PULMONARY DISEASE

Common among smokers, COPD is a group of chronic inflammatory lung diseases, such as emphysema and bronchitis, that cause difficulty breathing, cough, mucus production, and wheezing. Damage to the lungs caused by COPD occurs slowly over many years and worsens over time. While the damage is irreversible, patients who stop smoking may be able to regain some of their lung function, decrease inflammation in their respiratory tract, and improve their overall immune system.

For those who suffer with COPD, there are options to improve your breathing and decrease the risk of more serious complications, such as collapsed lung. Treatment options may include the use of medications, inhalers, oxygen therapy, and pulmonary rehabilitation. **For more information, visit avitahealth.org/services/pulmonary-medicine.**

COPD includes

EMPHYSEMA

A condition in which the air sacs of the lungs are damaged, stretched and enlarged.

CHRONIC (LONG-TERM) BRONCHITIS

A condition in which the airways, or bronchial tubes, that move air to and from your lungs become inflamed and irritated.

welcome

Guillermo Amurao, MD

Dr. Guillermo Amurao joins Avita Health System with 25 years of experience practicing and teaching medicine in the United States and abroad. Dr. Amurao earned his medical doctorate from the University of the Philippines College of Medicine in Manila, Philippines. He completed a residency in internal medicine, as well as fellowships in pulmonary, critical care, and sleep medicine at the University of Toledo in Ohio. Dr. Amurao is certified by the American Board of Internal Medicine, Pulmonary Medicine, and Critical Care Medicine.

introducing... **AVITA HOME HEALTH & HOSPICE**

HomeCare Matters Home Health and Hospice has officially changed its name to Avita Home Health and Hospice. A new name with the same great care! Patients will not be affected by the name change – services, staffing, and billing will remain the same. We are committed to patient satisfaction and outstanding quality, staying dedicated to providing home health care, palliative care, and hospice services in the comfort of your home. Visit avitahomehealth.org for more information.

Serving Crawford, Richland, Morrow, Huron, Marion, Knox, Seneca, and Wyandot Counties

1-800-4NURSES or 419-468-7985

our services

HOME HEALTH CARE

Provided to those individuals who need skilled, short-term and intermittent home health needs following a surgery, illness, injury, wound care, IV Therapy, or health decline who also have difficulty leaving their home.

PALLIATIVE CARE

Designed for those suffering from serious illnesses including cancer, cardiac disease, respiratory disease, kidney failure, Alzheimer's, amyotrophic lateral sclerosis (ALS), and multiple sclerosis. Palliative care is designed to help ease pain and control symptoms. It is NOT hospice.

HOSPICE CARE

A coordinated program of services providing physical, psychosocial, and spiritual care for patients with a life limiting illness. Our hospice program focuses on living the rest of your life your way, while helping you prepare and providing aftercare services for family and friends.

AFTERCARE SUPPORT

Assists adults and children with the coping process and helps them understand their grief before, during, and after a loved one passes.

New Leadership

Cathy Sapp, BSN-RN Executive Director

Cathy Sapp stepped into the role of Executive Director of Avita Home Health and Hospice in September of 2019, with 12 years of experience in health care, 9 of those years

with HomeCare Matters. A Richland County native, Cathy brings a passion for providing high quality home health care to our local communities.

A team you can trust from head to toe and everything in between...

AVITA ORTHOPEDICS & SPORTS MEDICINE

Whether you're training for a marathon, playing team sports, or want to enjoy life without joint pain, we have the expert for you. Consistently top-ranked in patient satisfaction, our team has over 180 years of combined experience preventing, diagnosing, and treating disorders of the bones, joints, ligaments, tendons, and muscles.

EASE INTO AN EXERCISE ROUTINE AND AVOID INJURIES WITH THESE TIPS:

- Stretch before and after you exercise
- Stay hydrated
- Don't overdo it
- Focus on your form and use proper technique
- Create a routine
- Get plenty of sleep

SHOULD I PUSH THROUGH THE PAIN?

Listen to your body! Musculoskeletal pain may be the result of a serious injury or years of damage and disease that needs professional treatment. Living with this kind of pain can prevent you from living your life to the fullest and enjoying the activities and people that you love the most. Over time, it can cause further damage to your body.

At Avita, you don't have to travel far to find the right doctor for you. We have orthopedic and sports medicine specialists in Ontario, Galion, Bucyrus, Bellville, and Marion.

SIGNS YOU MAY NEED joint replacement

- 01** Pain in your hip or knee when walking, sitting, or standing
- 02** Pain in your shoulder, especially when doing daily activities that involve lifting your arms
- 03** Decreased range of motion in your joint
- 04** Stiffness or soreness in your joint
- 05** Pain or discomfort in your joint that keeps you awake at night
- 06** Swollen joints

We have experts that specialize in shoulder, hip, and knee replacement and revision. Using the most advanced surgical techniques and treatments, our joint replacement patients are up and walking just one day after surgery! We provide concierge services, "Joint Camp" education, and a dedicated team of joint replacement specialists that are top-ranked in patient satisfaction.

Women's Health at Avita welcome

GWENDOLINE FANG, MD

ANNE CLARK, DO

Gwendoline Fang, MD

Joining Avita with six years of experience, Dr. Fang earned her Medical Doctorate from Ross University Medical School in Dominica, West Indies and completed a residency in Obstetrics and Gynecology at the MedStar Franklin Square Hospital Medical Center in Baltimore, MD.

Anne Clark, DO

Dr. Clark joins Avita with over eight years of experience and is board-certified in Obstetrics and Gynecology. She earned her Doctor of Osteopathic Medicine at Lake Erie College of Osteopathic Medicine in Erie, PA and completed a residency at Doctor's Hospital in Columbus.

AVITA'S MATERNITY TEAM

Avita Galion Hospital's Maternity Center has been recognized by the Ohio Hospital Association and the Ohio Department of Health for completing the Ten Steps for Successful Breastfeeding. This 5-star recognition is part of the Ohio First Steps for Healthy Babies initiative to award hospitals for taking steps to promote, protect, and support breastfeeding in their organization. We are proud of the impact we have on improving the outcome of children's lives by supporting their first steps.

AVITA OFFERS 3D Mammography

A revolutionized exam that detects up to 65% more invasive breast cancers than traditional mammography. Superior accuracy means better, earlier detection and a reduced chance of being called back for additional imaging. Now available at Bucyrus, Galion, and Ontario Hospitals.

To schedule your mammogram, call 419-462-3310

Women's Health Services available at Avita

3D MAMMOGRAPHY: An advanced imaging test that captures multiple images from different angles. These digital images are then reconstructed or "synthesized" into a set of three-dimensional images by a computer. This gives a clear picture of the breast, even those with dense tissue. A 3-D image makes it easier for doctors to catch breast cancer early. It also reduces the chance of a false positive reading and being called back for additional imaging.

3D GUIDED STEREOTACTIC BREAST BIOPSY: Women who receive an abnormal mammogram may now benefit from a digital stereotactic breast biopsy. This is an accurate and efficient image-guided procedure that is less invasive than the traditional surgical alternative to retrieve samples of tissue for examination.

OB/GYN: Dr. Tyler Huggins, Dr. Anne Clark, Dr. Gwendoline Fang, Ami Hay-CNP, and Sherri Gillam-CNP are our employed physicians and advanced practice providers offering services in

Bucyrus, Galion, and Ontario. Some of the services offered are prenatal care, annual exams, PAP smears, as well as treatment for menstrual problems, hormone changes, and menopausal and post-menopausal periods of life.

BREAST SURGERY: Our general surgeons and plastic reconstruction surgeons provide a variety of breast procedures including lumpectomy and mastectomy, as well as reconstruction for breast cancer. We also perform breast reductions, breast augmentations, and breast lifts.

URINARY INCONTINENCE SURGERY: Dr. Tyler Huggins performs sling surgery for women who experience urinary stress incontinence, such as urinating when coughing, sneezing, laughing, jumping, or lifting. During sling surgery, Dr. Huggins uses tissue or synthetic mesh to create a "sling" to support the urethra and neck of the bladder. This extra support helps prevent urine leaks.

DEXA SCAN (Bone density testing): A DEXA scanner uses beams of very low-energy radiation to determine the density of the bone. The test is painless, safe, and is usually covered by insurance.

OSTEOPOROSIS CLINIC: Osteoporosis causes bones to become weak and brittle - so brittle there is risk of fracture, even with mild stress, such as coughing. Osteoporosis occurs when the creation of new bone cannot keep up with the loss of old bone. Our clinic helps patients modify risk factors for bone loss and falls.

NURSE NAVIGATION: Our nurse navigator, Melody Joice, supports women on their breast health journeys and serves as the touchstone throughout their continuum of care. When patients receive an abnormal result on their mammogram screening, Melody steps in to provide education that empowers women to

confidently participate in decisions about their treatment, offers resources to overcome treatment barriers, and facilitates the coordination of care.

CHILDBIRTH CLASSES: Led by our OB staff, classes give soon-to-be moms access to information on labor and delivery, including relaxation techniques, newborn care, and postpartum care, as well as opportunities to ask questions and discuss fears.

BREASTFEEDING CLASSES: Our lactation consultant, Deanna Grube, holds monthly classes for moms and their partners to learn the ins-and-outs of breastfeeding, including what to expect in the first few weeks, positioning techniques, and common breastfeeding difficulties.

SPROUTS GROUP: For pregnant and nursing moms, Sprouts is a breastfeeding learning group that is led by our certified lactation consultant. It offers opportunities to learn, share information, and ask questions about breastfeeding.

Check out our classes and education on our website at avitahealth.org/services/womens-health

General Cardiology

Joining Avita Heart with 33 years of cardiology experience, Dr. Gumprecht is board-certified in cardiovascular disease and interventional cardiology. He earned his medical degree at the University of Washington in Seattle, completed a residency in internal medicine, and is fellowship-trained in cardiovascular diseases.

Accepting Patients in Bucyrus and Galion.
Call **419-462-4600** to schedule an appointment.

AVITA HEART cardiac device clinic

Providing Personalized Care Throughout Your Heart Health Journey

At the Avita Heart Cardiac Device Clinic, our team specializes in the implantation and long-term monitoring of your cardiac device, including pacemakers, heart rhythm monitors, and implantable cardioverter defibrillators. All of our cardiac devices are surgically implanted at Avita Ontario Hospital, keeping advanced heart care close to home.

Cardiac devices are often needed to control irregularities caused by the heart's electrical system, such as irregular heartbeat and heart

rhythm disorders. After your cardiac device is implanted, we perform regular check-ups to ensure it's working properly. We monitor the battery status and review the stored cardiac information every one to three months after your initial appointment. In some cases, we can perform a check-up on your cardiac device from the comfort of your house using our home monitoring equipment.

715 Richland Mall, Ontario

To schedule your appointment, call 419-462-4600.

devices

Pacemaker – A small device that is surgically implanted under the skin of the chest to manage heart rhythm disorders, such as bradycardia - when the heart beats too slowly, or arrhythmia - when the heart beats irregularly. Typically the size of a half dollar, pacemakers contain a tiny computer, battery, and 1-2 wire leads that produce electrical pulses to keep the heart beating at a normal rate.

Heart Rhythm Monitor – Commonly referred to as loop recorders, heart rhythm monitors continuously record your heart's rhythm for up to 36 months. Smaller than a single AAA battery, heart rhythm monitors are surgically implanted in the upper chest, just under the skin. They are often used to monitor heart palpitations, unexplained syncope (fainting spells), and certain types of irregular heartbeat that are undetectable on short-term heart rhythm recording devices.

Implantable Cardioverter Defibrillator (ICD) – A small, battery-powered device that monitors heart rhythm and detects irregular heartbeats. An ICD is implanted under the skin of the chest and is connected to the heart with tiny wire leads, similar to a pacemaker. Often used in patients who have dangerously fast heartbeats, an ICD delivers electric shocks to the heart to fix abnormal heart rhythms that may lead to sudden cardiac arrest.

WORLD'S SMALLEST
pacemaker

We now implant Micra™ Pacemakers! The Micra™ Transcatheter Pacing System (TPS) is the world's smallest pacemaker. It's implanted directly into the heart without wire leads.

Visit avitahealth.org/services/cardiology for more information.

ENT FOR ALL AGES

At Avita Health System, our ear, nose, and throat (ENT) specialists treat a broad range of conditions in patients of all ages.

MICHAEL BARAT, MD

Some of the common conditions that ENT's treat in pediatric patients are tongue ties, enlarged tonsils & adenoids, chronic tonsil infections, and obstructive sleep apnea. With adult patients, ENT's often treat voice & swallowing problems, sinusitis, deviated nasal septums, head & neck masses and tumors, and nasal obstructions. There are several conditions that are common in both pediatric and adult patients, including ear infections, hearing difficulties and problems, and eardrum perforations.

EAR INFECTIONS

Although ear infections affect both adult and pediatric patients, it is more frequently diagnosed in children. Common signs of an ear infection are ear pain, fluid drainage from the ear, hearing trouble, and tugging or pulling at an ear. Treatment often includes antibiotics or ear tubes for recurrent ear infections.

EARDRUM PERFORATIONS

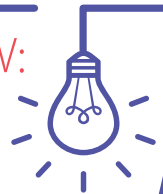

The eardrum is delicate and can be easily torn. The most common cause of an eardrum perforation is from an ear infection. Other causes may be trauma to the head or ear, loud noise exposure, sudden change in air pressure, and sticking a foreign object in the ear. Eardrum perforations may heal on their own, however, some may need patched or repaired surgically.

HEARING DIFFICULTIES AND PROBLEMS

Hearing difficulties and problems can occur at any age. It may be something that a child is born with, a result of trauma, infection, or a product of aging. Depending on the cause, hearing difficulties are often corrected with medication, surgery, or hearing aids.

DID YOU KNOW:

3 out of 4 children will have at least one ear infection by their 3rd birthday*

To schedule an appointment with an Avita ENT specialist, call **419-775-1091**.

FERNANDO MORELL, MD

Enhancing Patient Confidence

At Avita Health System, our Plastic and Reconstructive Specialists perform a broad range of procedures and treatments to help enhance or restore your appearance.

Schedule an appointment with Dr. Bodjanac or Dr. Ghazoul at 715 Richland Mall, Ontario or visit avitahealth.org/services/plastic-surgery to learn more.

WALTER BODJANAC, DO
419-756-9996

also performs these procedures:

- Carpal tunnel
- Chemical peels
- Juvederm® dermal filler injections
- Laser hair removal
- Laceration and wound repair

Dr. Bodjanac and Dr. Ghazoul both offer the following procedures:

Arm lift (*brachioplasty*)

Botox injections

Breast augmentation

Breast implant removal

Breast lift (*mastopexy*)

Breast reconstruction

Breast reduction

Brow lift

Ear deformities and defects (*otoplasty*)

Excess skin removal of the stomach (*panniculectomy*)

Eyelid surgery (*blepharoplasty*)

Face lift (*rhytidectomy*)

Liposuction

Male breast reduction (*gynecomastia*)

Neck lift (*rhytidectomy*)

Nasal reconstruction (*rhinoplasty*)

Scar revision

Skin cancers

Skin reconstruction with skin grafts or flaps

Tummy tuck (*abdominoplasty*)

Thigh lift

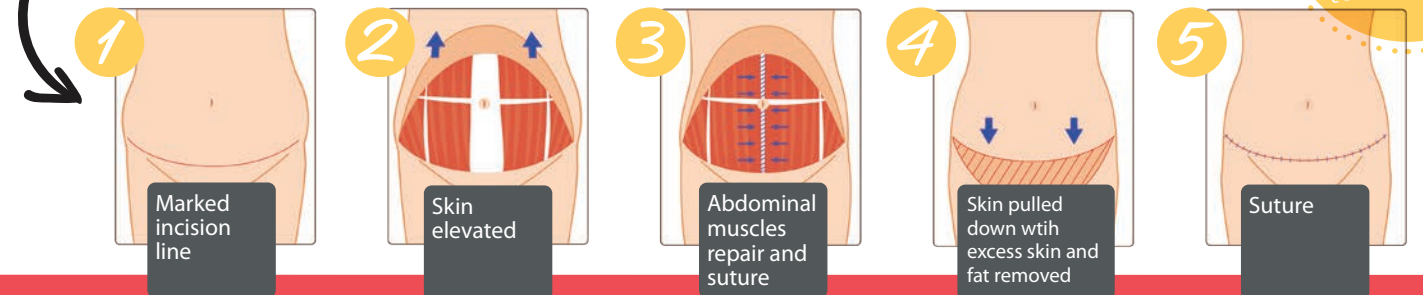

TERESA GHAZOUL, MD
567-307-7642

also performs these procedures:

- Restylane® injections
- Voluma® facial volume injections
- Kybella® for chin fat removal
- Full-face laser resurfacing

Tummy Tuck EXPLAINED

Abdominoplasty (tummy tuck) is a surgical procedure to improve the abdomen's appearance by removing skin and fat when diet and exercise fail. Factors that may lead to the decision to have a tummy tuck include aging, heredity, pregnancy, prior surgery, and significant fluctuations in weight.
