Avita Expands In Five Areas On Fourth Street In Ontario

Yes, it's that exciting!

① Family Medicine

Three Ontario primary care physicians have joined the Avita Health System family of providers. Dr. Edward Adkins, Dr. Kathy Bakenhaster, and Dr. G. David Long have teamed up with Avita to offer family medicine for patients of all ages. Formerly referred to as Ontario Medical Associates, the family medicine group remains in their 2007 W. Fourth Street office in Ontario. All three physicians are accepting new patients. To schedule an appointment, call 419-529-6195.

Edward Adkins, MD

Kathy Bakenhaster, MD

G. David Long, MD

② Endovascular/Vascular

Dr. Barry Zadeh* has extensive training and experience in vascular, thoracic, and endovascular surgery. Endovascular surgery is less-invasive and can treat two major problems of the blood vessels: aneurysm and narrowing. Dr. Zadeh also treats Peripheral Artery Disease (PAD). PAD raises your risk of heart attack and stroke. Symptoms of PAD include

pain and discomfort in your legs during activity or during rest, numbness or tingling in your legs, a non-healing foot/leg wound, and cold legs or feet. Dr. Zadeh has performed over 4,000 minimally invasive procedures in his practice over 20 years. To schedule an appointment with Dr. Zadeh, call **419-462-4541**.

③ Pain Management

Dr. Robert Gould*, Avita's Interventional Pain Specialist, treats patients who suffer with unwanted, nagging pain. Avita's Pain Management Center treats both acute and chronic causes of pain. Dr. Gould is trained to provide the most advanced treatments in the management of pain. These treatments are more tolerable,

less invasive, and effective at returning patients to a better life. Dr. Gould commonly treats conditions such as neck and back pain, pinched nerves, headaches, surgical pain, arthritis pain, chronic pelvic pain, nerve damage, muscle spasms, and RSD. With questions, or to schedule an appointment with Dr. Gould in Ontario or Galion, call **419-462-4547**.

④ Sports Medicine

Dr. Ryan Wagner and Dr. Thomas Zuesi, Avita's Sports Medicine physicians, are available in Avita's new Ontario Specialty Center to care for active individuals or athletes who may be struggling with a sports-related injury. Sports medicine conditions that are common include: sprains and strains, tendonitis, stress fractures, knee and shoulder injuries, and concussions. Both physicians are experienced in "return to play" decisions and are also instrumental in strength training, conditioning, and managing both chronic and acute illnesses in athletes. To schedule an appointment, call:

Dr. Ryan Wagner: 419-562-5281
Dr. Thomas Zuesi: 419-468-7059

⑤ Orthopedics

Orthopedic surgeon, Dr. J. Jay Guth, is also seeing patients in the new Ontario office. Dr. Guth is a fellowship-trained orthopedic surgeon who has a primary office in Bucyrus. Dr. Guth is specially trained to treat conditions of the muscles, tendons, joints, and bones. Dr. Guth commonly performs ACL reconstruction,

arthroscopic surgery, knee replacement, rotator cuff repair, shoulder replacement, and treats conditions such as bone fractures, bursitis, meniscus tears, and general orthopedics. To schedule an appointment with Dr. Guth, call **419-562-5281**.

Virginia Hall, CNP

Jenna Miller, CNP

Healthcare for your

entire family

Virginia Hall, CNP, Begins in Bucyrus!

Avita has welcomed Virginia Hall, CNP, to our healthcare team. She is accepting patients of all ages at 130 Hill Street in Bucyrus and is collaborating with Dr. Nyan Win. Virginia Hall entered the medical field as a Paramedic in Montgomery, Alabama. She furthered her education with a Bachelor of Science in Nursing from Auburn University in Montgomery. Upon receiving her Bachelor Degree, Virginia Hall worked at a variety of hospitals, including Tampa General Hospital in Tampa, Florida, Dublin Methodist Hospital in Dublin, Ohio, and Children's Hospital in Columbus. Virginia Hall recently completed graduate school at Otterbein College in Westerville, earning her certification as a Family Nurse Practitioner.

Jenna Miller, CNP, Begins in Crestline!

Jenna Miller, CNP, joined Avita Health System and is collaborating with Dr. Andrew Lee in Crestline. She is accepting patients of all ages.

Jenna Miller began her formal education at Bowling Green State University where she earned her Bachelor of Science in Nursing. She then advanced her education at The Ohio State University by earning her Master of Science as a Family Nurse Practitioner. Jenna Miller has work experience as a staff nurse, caring for patients in the Acute General Medicine Unit at Riverside Methodist Hospital in Columbus and as a medical provider with the Ohio Gastroenterology Group at Mount Carmel West.

Amanda Kovolyan, MD, Begins in Bucyrus!

Dr. Amanda Kovolyan is accepting patients of all ages at her medical clinic at 139 Gaius Street in Bucyrus. Dr. Kovolyan began her education with a Bachelor of Science in Athletic Training from Lincoln Memorial University in Harrogate, Tennessee. She then furthered her education with a Master of Education in Administration and Supervision and a Bachelor of Science in Health before completing her Medical Doctorate at St. George's University in Grenada, West Indies. Upon earning her

medical degree, Dr. Kovolyan completed a Residency in Family Practice at the Fort Wayne Medical Education Program in Fort Wayne, Indiana. She is board-certified in Family Medicine and is a member of the American Academy of Family Physicians, Indiana Academy of Family Physicians, Indiana State Medical Association, and the American Medical Association. To schedule an appointment with Dr. Kovolyan, call **419-563-9855**.

Amanda Kovolyan, MD

Sarah Metzger, MD

Sarah Metzger, MD, Begins in Galion!

Dr. Sarah Metzger, a native of Crestline, has a medical clinic conveniently located inside Galion Hospital, where she is accepting patients of all ages. Board-certified in Family Medicine, Dr. Metzger earned her Bachelor of Science in Natural Sciences from The University of Akron before attending Northeastern Ohio Universities College of Medicine in Rootsville, OH, to receive her Medical Doctorate. In addition to her various externships and internships, Dr. Metzger completed a residency in Family Medicine through the Summa Family Medicine Residency Program in Akron, OH. She is a member of the American Academy of Family Physicians, Ohio Academy of Family Physicians, American Medical Association, and the Ohio State Medical Association. To schedule an appointment, call **419-468-0796**.

What is a CNP?

A Certified Nurse Practitioner (CNP) is a registered nurse (RN) who has completed advanced education (a minimum of a master's degree) and training in the diagnosis and management of both acute and chronic illnesses. CNPs provide a broad range of healthcare services and maintain close working relationships with physicians. CNPs spend quality time with patients with an effort to learn which treatment options are best for them. CNPs often serve as a patient's primary care provider.

FEEL BETTER BY VISITING AVITA'S

REFLUX AND HEARTBURN CLINIC

Acid reflux and heartburn patients may now have some hope! Avita has started a Reflux and Heartburn Clinic to aid in the diagnosis and treatment of Gastroesophageal Reflux Disease, or commonly known as GERD. New, painless procedures and advanced technology are now available at Avita to aid in treatment and diagnosis. Below are three new testing procedures that can be performed in Avita's Reflux and Heartburn Clinic.

BRAVO CAPSULE TESTING

This outpatient test is used to record abnormal amounts of acid in your esophagus (food pipe) over 48 hours. During the test, a small pH monitor, in the form of a capsule, is attached to the bottom part of your esophagus by passing a small catheter through your mouth, along the back of your throat, and down into the lower part of your esophagus. Once in place, the capsule is detached from the catheter. The capsule transmits data to a wireless recording device which is worn on your belt or around your waist. The pH recorder logs the levels of acid in your esophagus.

ESOPHAGEAL MANOMETRIC

Esophageal manometry is an outpatient test used to identify problems with movement and pressure in the esophagus. During the test, a small tube is passed through the nose, along the back of the throat, down into the esophagus, and into the stomach. The tube measures the strength and muscle coordination of your esophagus when you swallow. The goal of the test is to assess how the wave-like motion of your esophagus moves liquids into your stomach while examining the muscular valve that connects the esophagus with the stomach.

IMPEDANCE pH CATHETER

The impedance catheter is an outpatient test used to measure the amount of gastric reflux over a period of time, normally 24 hours. During the test, a very small flexible tube is passed through the nose and down into the esophagus. The catheter is then secured to your nose with tape, and the end is connected to a 24-hour recording device called a pH recorder. The pH recording is used to record the levels of acidity in the esophagus, as well as the backflow of stomach contents. The pH recording unit may be worn on your belt or around your waist or shoulder.

Did You Know?

Acid reflux can be serious. If you have chronic acid reflux, you are at risk for developing a pre-cancerous condition called Barrett's esophagus. Avita's new "HALO Ablation" procedure can remove Barrett's and decrease your risk for esophageal cancer.

For more information on Avita's Reflux and Acid Clinic, call:

Dr. James Goudy: 419-468-8323

Dr. Daryl Sander: 419-468-7785

Laura Danals, DNP: 419-468-8323

New In Bucyrus!

Pediatric and Adult Audiology and Speech Therapy

To better accommodate patient needs, Avita has opened Audiology and Speech Pathology offices in Bucyrus! Audiologists are professionals who evaluate, diagnose, treat, and manage hearing loss and balance disorders in adults and children. Avita's audiologists treat all ages and types of hearing loss.

Avita's new Bucyrus Audiology Center offers:

Hearing Screenings (including industrial)

Full Hearing Aid Services

Earmold Services (custom earplug orders and new hearing aid earmolds)

Wax Removal

419-468-0547

959 Hopley Avenue, Bucyrus

Reasons to purchase your hearing aids from our audiology offices:

We fit hearing aids for all ages, including pediatrics!

We have the latest hearing aid technology, including digital!

We will service any type of hearing aid, regardless of the original point of purchase, make, or model.

We are, on average, less expensive than hearing aid dealers.

Avita has a board-certified ENT physician on staff... just in case there is a problem or question.

We offer aural rehabilitation to improve communication skills.

Did You Know?

Regular exposure to loud noise may accelerate hearing loss. The risk intensifies with greater decibel levels and longer exposure. Levels of 80 dB and greater present a significant risk to your hearing.

- Leaves Rustling: 15 dB
- Someone's Whisper: 30 dB
- Rainfall: 50 dB
- Conversational Speech: 60 dB
- Baby Crying: 80 dB
- Train: 100 dB
- Jackhammer: 120 dB
- Jet Engine Takeoff: 140 dB

You can't have happy feet with a diabetic foot ulcer...

Avita's Wound Center can help

Simply put, a diabetic foot ulcer is a breakdown in the skin of the foot. Skin breakdown can include red infected areas, calluses, blisters, or sores. Treating even minor skin conditions of the foot can improve the chance of healing, especially for diabetics.

Diabetic foot ulcers are primarily caused by neuropathy (loss of sensation) and a lack of blood flow to the foot. Because diabetics have a decreased ability to fight infections, the healing process can become difficult once an ulcer is formed. Older individuals may notice a prolonged healing time, however, the chance of recovery is the same regardless of age.

Diabetics with foot ulcers are at an increased risk of further complications, including infection, sepsis (complication of infection that leads to swelling), and amputation of the diseased foot. Getting professional help immediately is

vital in healing the wound and returning to a normal life.

Avita's Wound Healing program involves an entire team of physicians with the right expertise to heal wounds. The lineup of physicians includes Dr. Samantha Bark, Foot and Ankle Surgeon, as well as Dr. Walter Bodjanac, Plastic and Reconstructive Surgeon. Bucyrus Hospital is home to Avita's hyperbaric oxygen chamber, which is instrumental in returning diseased feet to health by delivering an increased amount of oxygen. Recently, a satellite wound clinic has been established at Galion Hospital for the convenience of patients.

Patients across the region choose Avita's Wound Healing program because we specialize in the latest therapies and because we beat the national average in healing success rates. For more information or to schedule an appointment at the wound clinic in either Bucyrus or Galion, call **419-563-9899**.

Avita Wound Healing

BUCYRUS | GALION

Preventing Diabetic Foot Ulcers

- 1 Educate yourself on diabetes.
- 2 Ask your doctor how many professional foot examinations you need each year.
- 3 Check your feet daily for foot deformities and/or conditions.
- 4 Take extra precaution if you cut or blister your feet, and/or form calluses.
- 5 Wear comfortable shoes.
- 6 Wash your feet daily.
- 7 Keep your toe nails clean and trim.

Try Galion Hospital's

ER FastTrack

It may not be life-threatening.... but it still may need medical attention.

It is still an ER visit....but our new FastTrack Program puts patients who aren't faced with a life-threatening or critical illness or injury on a faster track back to health. By adding dedicated beds and providers to our emergency department, we're able to take care of patients quicker. This benefits patients who may need an ER visit for conditions such as cuts, sore throats, infections, and other less critical symptoms.

In order to raise our customer satisfaction, it was necessary to begin a new process in the ER. Patients find it discouraging to wait hours to see a doctor, especially those with sick children. Most of the time, an extended wait time happens because the flow of patients into a traditional ER present more serious health problems and need treated first. Having a dedicated ER space for patients with less critical symptoms allows Galion Hospital to take care of both sets of patients efficiently.

Galion Hospital's FastTrack is open every day, from 12 noon until 12:00 midnight.

Bucyrus Hospital's Kid-Friendly ER

Parents find it great to use Galion Hospital's FastTrack because it helps with wait time. Nearly 12 miles away, Bucyrus Hospital's ER is also kid-friendly because of a special designed room for kids! Toys, bubbles, and a wall full of life-size animals ease the anxiety for both the kids and the parents. Although Bucyrus Hospital has the necessary state-of-the-art emergency care equipment in place, we also have a special place for them to have fun, feel comfortable, and most importantly, feel safe.

Pictured here is Jeremy Schrote, Avita Health System's "Chef Jeremy".

GALION AND BUCYRUS HOSPITALS

Get Creative

WITH DIETARY SERVICES

Room Service

Avita is committed to the comfort of our patients, as well as satisfaction with our food service! As part of this commitment, Avita provides a complete room service program with a restaurant-style menu that each patient can order from. We offer a wide range of hot and cold breakfast items, along with lunch and dinner selections. Because we work with your medical provider, our menus even reflect dietary restrictions requested by your provider.

Catering

Don't let anybody tell you that hospital food is no good! Ours is so scrumptious that we had to start a catering service to handle the number of requests we receive for dinner parties, events, and graduations! Our catering menu is full of delicious salads, sandwiches, wraps, appetizers, platters, and more. Samples of items on the catering menu include:

- Strawberry Spinach Crunch Salad
- Sweet Curry and Arugula Salad
- Sweet Italian Meatballs
- Chicken Wings
- Wrap Platters
- Cheese / Fruit / Veggie Platters

To check out our catering menu in detail, visit avitahealth.org and go to "Services" and then "Nutrition Services". You can also call Wade Cramer, Avita's Nutrition Services Manager, at 419-468-0677.

A few smart eating tips:

- 1) Make half your plate fruits and vegetables
- 2) Make at least half of your grains whole
- 3) Switch to skim or 1% milk
- 4) Vary your protein food choices
- 5) Cut back on sodium and empty calories from solid fats and added sugars
- 6) Drink water instead of sugary drinks

LEARN TO SMILE AND LIVE WITHOUT PAIN

By Dr. Robert Gould*, Avita Pain Management 419-462-4547

Chronic pain is one of the most costly medical conditions in the United States, accounting for disability, job loss, decreased productivity, and increased medical expenses. More than 80 million adult Americans suffer from chronic pain. Chronic pain robs people of their quality of life and can lead to other conditions such as depression and insomnia.

Chronic pain can be caused from disease, disorder, or disability. It can originate in

the bones, muscles, organs and nerves. Back pain is one of the most common complaints.

Unfortunately, too many people with chronic pain suffer in silence. They often think nothing can be done for them and are unaware of the treatments that are available. People having pain that interferes with daily living should consider the services of a pain specialist, a physician who has special training in the treatment of pain and can manage chronic pain so patients can return to normal daily activities.

Avita Pain Management has four main goals:

- Diminish the level of pain
- Improve function and mood
- Decrease the need for medications
- Improve the patient's quality of life

Common conditions that patients call Avita Pain Management for include: neck pain, work-related injuries, back pain, persistent pain after surgery, headaches, pain along the spine, generalized arthritic pain, RSD (Reflex Sympathetic Dystrophy), nerve damage, muscle spasms, chronic pelvic pain (including interstitial cystitis), abdominal pain, and shingles.

In recent years, several technological, surgical, and pharmaceutical advances

have revolutionized the treatment of chronic pain. Advanced procedures that we commonly utilize are:

- Minimally-invasive injections of anesthetic and anti-inflammatory medications on the spine to diagnose and manage back, neck, and leg pain
- Radio-frequency ablation using heat to disable pain-transmitting nerves in the spine
- Implants programmed to deliver low-voltage electricity or an anesthetic agent to pain centers in the spine
- Several types of nerve blocks injected into specific areas of the body to prevent, diagnose, and treat a variety of painful conditions

Sometimes it takes time to pinpoint the exact cause of pain. A number of tests (blood work, imaging, and nerve testing) can help with a diagnosis. The elimination of potential disorders and diseases can help us with treatment even while we look for the exact cause.

Pain is subjective. Only patients know how they feel. That's why we ask patients to rate their pain on a scale of zero to ten. It's important that patient's give honest responses so we can design the safest and most effective treatment plan for them.

Avita Pain Management Services are available in Galion, Ontario, and Bucyrus. To schedule an appointment with one of our pain specialists, call 419-462-4547.

Avita Patients Rest Easy Over Needle Sticks

Both Galion and Bucyrus Hospitals are using a new technology that makes it easier for medical providers to “see” patient veins for an IV or blood draw. This new technology works great on all patients regardless of age, body type, or skin tone. Parents of pediatric patients find it especially valuable because it reduces the number of needle sticks and helps guide professionals to hard-to-find veins.

“Top-quality patient care is our priority,” comments Aimee Delong, RN, Director of Nursing at Avita. “We see the integration of this technology as a win-win for our hospitals and our patients. We are able to approach an IV or blood draw with much more accuracy, reducing the number of sticks, which in turn reduces a patient’s pain and stress.” The technology works by projecting a bandage-size image onto the skin. A harmless, near-infrared light and video camera builds an image of the veins beneath the skin. The device is picking up the hemoglobin in the bloodstream, instead of the pigment of the skin surface.

Avita’s new vein-viewer technology was graciously donated by Galion Hospital’s Auxiliary.

Open Bore MRI Available at Bucyrus Hospital Every Saturday

Bucyrus Hospital’s new high-field open MRI allows physicians to evaluate the most complex pathologies of disease for patients who are receiving care in various specialties, including cardiovascular, musculoskeletal, renal, and pediatrics. The large opening of the unit allows almost one foot of space above a patient’s head. This is very beneficial for patients who suffer with claustrophobia. More than 60% of scans can be completed with a patient’s head outside the opening. The new mobile unit accommodates patients up to 550 pounds, allowing for more leg and elbow room. The unit is made with lightweight coils which enables shorter exam time. Among all these benefits is also comfortable positioning. Coupling comfort with shorter exam times, eases the anxiety of many patients, specifically children. Most exams can be completed without sedation. For more information, call **419-563-9327**.

News

Galion Hospital Welcomes Dietician, Jessica Hall

Jessica Hall is playing a very instrumental role in the health of Avita patients....nutritionally! Dieticians are experts in food and nutrition. It is common for hospital patients to spend time with a dietitian if they have health conditions such as diabetes or kidney disease. Other patients who have conditions that put them at risk for malnutrition, such as those who have experienced a recent weight loss, a decrease in appetite or food intake, or patients who cannot consume food orally, also benefit from a dietician. Medical providers commonly refer patients to a dietician on an outpatient basis as well. Adults and children who need weight management will consult with a dietician, as well as patients who are having bariatric surgery or those who need to follow a special diet.

Jessica Hall received her Bachelor of Science in Dietetics at The University of Akron. She currently serves as a Nutritional Medicine Tech for the United States Air Force Reserve. To see if Ms. Hall may benefit you, contact your physician for a referral, or contact Ms. Hall directly at **419-468-0674** or jhall@avitahs.org.

Bucyrus Hospital Begins Medication Management Center for Coumadin® Patients

It’s officially a service offered at both Galion and Bucyrus Hospitals! The popularity of Galion’s Medication Management Center (MMC) encouraged Avita to open one in Bucyrus. The MMC is a pharmacist-managed anticoagulation service, or more commonly known as a “Coumadin Clinic.” The MMC is a convenient alternative for patients who need to monitor their Coumadin levels and manage their dosage adjustments.

Patients that visit the MMC are seen by a trained pharmacist at each visit. The pharmacist performs a fingerstick lab test, evaluates the patient, and determines if any dosage adjustments are needed. Patients will also receive education about their Coumadin level and leave knowing if their level needs adjusted. The benefit of the MMC that most patients talk about is that they are given their results and instructions when they leave.

Patients must be referred to the MMC by their medical provider. Although there is an office charge for each visit with the pharmacist, this service is commonly covered by Medicare and many other insurance providers. The MMC is open by appointment only, Monday through Friday. For more information or to schedule an appointment, call:

Galion Hospital: 419-462-4590
Bucyrus Hospital: 419-563-9835

Briefs

Diabetic Education Program Accredited, Classes Begin

If you are a diabetic patient who wants to take your disease seriously, then Galion Hospital’s Diabetic Education Class may be right for you. The goal of these classes is to be the resource and guide for diabetic patients who have no formal training on the disease, and who want to be able to self-manage their condition. Galion Hospital’s program has recently been accredited after intense research and a successful “pilot course” with a diabetic patient who had significant improvement in their A1C lab results. The

course focuses on seven self-care behaviors identified by the American Association of Diabetes Educators, and are: healthy eating, being active, monitoring, taking medication, problem solving, reducing risks, and healthy coping.

Avita’s Diabetic Educators become a mentor to their patients and work with an entire team of health professionals, including dieticians and exercise physiologists. Diabetics must have a medical provider’s referral to join the program. Classes are held once a week, for five weeks, and are for adults only. Participants may bring a guest! There is a fee associated with the course, however, that fee may be reimbursed by insurance. For more information on an upcoming diabetic class, contact Teresa Leatherow, RN, at **419-468-0717**.
